

WHAT IS CLAIMED IS:

1. A gas cooled dynamoelectric machine, comprising:
a rotor having a body portion, said rotor having axially extending coils and end turns defining a plurality of endwindings extending axially beyond at least one end of said body portion; and
at least one spaceblock located between adjacent said endwindings so as to define a cavity therebetween, said spaceblock having first and second sidewall portions engaging said adjacent endwindings, an upstream wall, and a downstream wall, said downstream wall of said spaceblock having a non-planar contour for reducing generated wake.
2. The dynamoelectric machine of claim 1, wherein said downstream wall has an aerodynamic contour to reduce the extent and strength of the generated wake.
3. The dynamoelectric machine of claim 2, wherein said downstream wall is defined as a generally parabolic curve.
4. The dynamoelectric machine of claim 1, wherein said upstream wall is generally planar.
5. The dynamoelectric machine of claim 1, wherein said spaceblock is comprised of a generally rectangular main body portion and a protrusion portion, said main body portion defining said upstream wall and said sidewall portions, and said protrusion portion defining said downstream wall.
6. The dynamoelectric machine of claim 5, wherein said downstream wall is defined as a generally parabolic curve.

7. The dynamoelectric machine of claim 5, wherein said upstream wall is generally planar.

8. The dynamoelectric machine of claim 5, wherein said protrusion portion is integrally formed with said main body portion.

9. A gas cooled dynamoelectric machine, comprising:

a rotor having a spindle and a body portion;

a rotor winding comprising axially extending coils disposed on said body portion and spaced, concentric endwindings extending axially beyond at least one end of said body portion, said endwindings and said spindle defining an annular space therebetween;

a plurality of spaceblocks located between adjacent ones of said endwindings thereby to define a plurality of cavities, each bounded by adjacent spaceblocks and adjacent endwindings and open to said annular space; and

each said spaceblock having first and second sidewall portions engaging said adjacent endwindings, an upstream wall, and a downstream wall, said downstream wall of at least one of said spaceblocks having a non-planar contour for reducing generated wake.

10. The dynamoelectric machine of claim 9, wherein said non-planar downstream wall has an aerodynamic contour to reduce the extent and strength of the generated wake.

11. The dynamoelectric machine of claim 10, wherein said non-planar downstream wall is defined as a generally parabolic curve.

12. The dynamoelectric machine of claim 9, wherein said upstream wall of each said spaceblock is generally planar.

13. The dynamoelectric machine of claim 1, wherein said at least one spaceblock is comprised of a generally rectangular main body portion and a protrusion portion, said main body portion defining said upstream wall and said sidewall portions, and said protrusion portion defining said non-planar downstream wall.

14. The dynamoelectric machine of claim 13, wherein said downstream wall is defined as a generally parabolic curve.

15. The dynamoelectric machine of claim 13, wherein said upstream wall is generally planar.

16. The dynamoelectric machine of claim 13, wherein said protrusion portion is integrally formed with said main body portion.
